

Blue Harvest Test Case: Data

We want to understand your data knowledge. For this we prepared this simple test. Use your preferred language/framework/technology.

Using the Marvel API <https://developer.marvel.com/docs> (You should create a key to consume the data), collect the data necessary to see all characters and the quantity of comics in which they appear:

Character name: text	quantity of comics they appear in: int
----------------------	--

Also, add 1 slide or a <https://excalidraw.com/> (or your preferred tool) to explain your solution.

Pretty simple it is not?

Considerations

- Character names are here: [GET /v1/public/characters](#)
- Comic information is here: [GET /v1/public/comics](#)
- This [sample code](#) can help you if you need it
- In case of any doubts feel free to contact us 

As we mentioned, you can use whatever framework/language/technology you'd like. We are going to evaluate the following points:

- Explanation clarity
- The correct quantity of characters
- Reproducibility: we want to run your solution and have the correct result
- This is a basic Data Engineering problem. However, we ask you to show your best solution as a data professional but please do not spend too much energy on this. Consider focusing on your strengths. Whether you are a BI (Business Intelligence) developer, a Data infrastructure Engineer, a Developer, do your best with the skills you have.
